## **Portfolio Visualization Sandbox**

- -- Boxplots for individual or aggregate spaces (y axis), sorted
- -- They represent the distribution of values along the x-axis: the median (midline), the interquartile range or IQR (box), the whiskers (1.5\*IQR), and outliers (dots).
- -- The 'Constrain Range?' option constrains the scale between 0 and the end of largest whisker + 5%; which effectively prevents distant outliers from skewing the scale of the plot.

## Options:

Constrain Range?: Box
